AMENDMENTS TO THE SPECIFICATION

Please amend the paragraph beginning at page 14, line 6 as follows:

At block 802 of method 800, a top level menu is displayed on a display screen of a computer, such as a small-screen PDA 300. The top level menu is also a parent menu to one or more submenus which may both be configured as modal menus. The top level menu is typically initiated by a user input such as the click of a mouse or the pressing of a pen or stylus to a touch-sensitive display screen. At block 804, a first menu selection is received from the top (or parent) level menu. The selection is a top level menu item displayed in the top level menu.
